REPORT ON OUTREACH AT KUNIHAR AND ARKI

A technical counselling and outreach session was conducted with the objective of guiding senior secondary students regarding their future academic choices and providing them with information about Jaypee University of Information Technology (JUIT). This initiative aimed to assist students in understanding potential career pathways after Class XII and to introduce them to the various academic streams and programmes offered at JUIT. Overall, the outreach activity proved to be highly effective, with a total interaction of approximately 200 students over the two days.

The sessions were conducted by the JUIT team comprising Dr. Tyson and Mrs. Jyoti Sharma, who represented the university across multiple schools. On 28 November 2025, the outreach team visited GBSSS Arki, GGSSS Arki, and GSSS Kunihar, where students were briefed about higher-education opportunities, curriculum structures, campus facilities, and prospects for personal and professional development. On 29 November 2025, similar technical counseling sessions were conducted at SVN Kunihar and Lakshay Public School, Arki, ensuring that students from diverse academic backgrounds received appropriate guidance.

Throughout these sessions, Class XII students were specifically engaged and provided insights into choosing suitable academic streams, understanding competitive exams, and evaluating university-level programmes based on their interests. The interactions were highly participative, and the students showed keen interest in learning about JUIT's academic environment, research culture, and specialization options. The initiative successfully achieved its goal of offering meaningful academic and career guidance and strengthening JUIT's engagement with the surrounding schools.
